

Multimodal models

CS 4804: Introduction to AI

Fall 2025

<https://tuvllms.github.io/ai-fall-2025/>

Tu Vu

Logistics

- Class canceled this Thursday
- Homework 1 & Quiz 1 will be released today
 - Homework 1 due in 3 weeks
 - Quiz 1 due in 1 week
- Final Project proposal (due 10/7)
 - Project research ideas
 - Check out [GPT-5 System Card](#) & [Gemini 2.5 Pro Technical Report](#)
 - New benchmarks
 - New prompting methods
 - Improving small models
 - ...

A multimodal LLM can accept inputs in multiple modalities and emit text outputs

Use cases of multimodal LLMs

Explain the meme

This meme humorously captures the common experience many researchers and readers encounter when reading academic papers. It shows a powerful, fierce lynx labeled "THE ABSTRACT" on the left and a smaller, cautious-looking domestic cat labeled "the paper" on the right.

The joke here is that an abstract (the brief summary at the beginning of a paper) often makes the research sound exciting, groundbreaking, or impactful, like a "fierce lynx." However, the actual content of the paper may feel less impressive, or overly complex, dense, or even disappointing by comparison, represented by the "scaredy-cat" on the right. This is a playful take on how expectations can differ from reality in academic writing.

Use cases of multimodal LLMs (cont'd)

(a) User:  { "smartphone": 1, "teddy bear": 1 }  { "cat": 3 }  { "book": 3, "vase": 1, "glass": 1 } 	MM1-30B (Ours): { "dog": 2, "frisbee": 1 }
(b) User:  Red circle: "no parking anytime!"  Red circle: "Raffaello"  Red circle: "Rue Saint- Paul"  Red circle:	MM1-30B (Ours): "Hyde Park"
(c) User:  furniture: bed frame, weight: 50 and 150 pounds (23 to 68 kg)  furniture: sofa, weight: 100 to 200 pounds (45 to 91 kg)  furniture: stove, weight: 150 to 300 pounds (68 to 136 kg)  furniture: refrigerator, weight: 200 to 300 pounds (91 to 136 kg)	MM1-30B (Ours):
(d) User:   total: $1 + 3 = 4$   total: $6 + 4 = 10$   total: $4 + 1 = 5$	MM1-30B (Ours): total: $4 + 1 = 5$

Fig. 1: MM1 can perform in-context predictions thanks to its large-scale multimodal pre-training. This allows MM1 to (a) count objects and follow custom formatting, (b) refer to parts of the images and perform OCR, (c) demonstrate common-sense and word knowledge about everyday objects, and (d) perform basic math functions. Images are from the COCO 2014 validation set [72].

Use cases of multimodal LLMs (cont'd)

User:

Photo:  Menu:  How much should I pay for all the beer on the table according to the price on the menu?

Wine & Beers			
White			
Pinotgrigio Gavi, Costa		Rose	
Spermau Chardonnay, Sicily	15/68	Cotignac Rosmarin, Lombardy	15/59
Bucco Verdicchio dei Castelli di Jesi	11/61	Sparkling	
	15/59	Comely Pinoscco, Costa	10/61
Reds			
San Felice, Chianti, Toscana, Tuscany		Beers	
Col di Sacco, Bard, Tuscany	13/50	Medalla	5
Stremann, Napa 27, Asti, Sicily	10/62	Alpine	6
	11/61	Hanschen	6
Plants			

MM1-30B-Chat (Ours): 12

Emu-Chat-37B: According to the menu, the price for all the beer on the table is **15.99**.

LLaVA-NeXT-34B: The image shows a menu with beer prices, but it's not entirely clear which specific beers are on the table. However, I can provide you with an estimate based on the visible prices. From the menu, it appears that the prices for beer are as follows: Magna: 5, Medalla: 5, Heineken: 6 Presidente: 6

Assuming that the beers on the table are Magna, Medalla, Heineken, and Presidente, and there are two of each, you would pay:

2 x Magna: $2 \times 5 = 10$, 2 x Medalla: $2 \times 5 = 10$, 2 x Heineken: $2 \times 6 = 12$, 2 x Presidente: $2 \times 6 = 12$ Total: $10 + 10 + 12 + 12 = 44$

Please note that this is an estimate based on the visible prices and the assumption that there are two of each type of beer. The actual cost may vary if the beers on the table are not the ones listed on the menu or if there are different quantities.

User: Explain why.

MM1-30B-Chat (Ours): There are 2 beers on the table, and each beer costs 6 according to the price on the menu. So, $2*6=12$.

Emu-Chat-37B: The price for all the beer on the table is 15.99 because each beer has a price of 10.99, and there are a total of five beers on the table. When you multiply the number of beers (5) by the price per beer (10.99), you get a total cost of 54.95 (rounded up to 15.99).

LLaVA-NeXT-34B: The image shows a menu with beer prices, but it's not entirely clear which specific beers are on the table. However, I can provide you with an estimate based on the visible prices. From the menu, it appears that the prices for beer are as follows: (...)

Fig. 2: MM1 can follow instructions and reason across images. Example and images from VILA [71]; VILA answers correctly when prompted with chain-of-thought.

- **Projector training:** Initially, only the projector is trained, while both the vision encoder and the language model (LLM) remain frozen.
- **Vision encoder training:** Next, the vision encoder is unfrozen and trained, with the LLM still frozen.
- **Full model training:** Finally, the LLM is unfrozen, allowing the entire model to be trained end-to-end.
